BACKGROUND

Established on 30th April 1928 as a company under Section 26 of the Indian Companies Act, 1913, the Indian Institute of Banking & Finance (IIBF), formerly known as the Indian Institute of Bankers (IIB), is a professional body of Banks, Financial Institutions, and their employees in India. IIBF during its 97 years of service been actively involved in examination, training & academics. It has emerged as a premier institute in banking and finance education. Considering the emerging requirements of finance professionals in the everchanging dynamic environment, IIBF has been providing quality training. The programs are designed in consultation with industry experts and human resources personnel with an endeavour to address the skill gaps on a continuous basis. The regular offerings in varied areas prepare the finance professionals ahead of the impending change. IIBF has state-of-the-art training facilities at its Leadership Centre at Mumbai, and it has four Professional Development Centres (PDCs) at Chennai, Mumbai, Delhi and Kolkata catering to the increasing demand for the focused training programmes.

Current status of Agriculture and Agriculture financing in India

Agriculture sector has so far crossed three revolutionary periods. Use of Hybrid varieties, mechanisation in agriculture, Usage of fertilisers and Pesticides and Reengineering in agriculture are the key aspects executed in the earlier three revolutionary periods that have created a sea change in Agriculture production. Currently Agriculture sector is entering the fourth agricultural revolution, namely 'Digital agriculture' which has emerged as a way of feeding the world sustainably using technologies and data science to optimise on-farm production and supply chains that are responsive to real-time consumer demand.

Agriculture occupies over 50 percent of India's workforce and contributes to around 17 percent of the gross domestic product (GDP). With a growing population and rising incomes in the cities, there is more and more burden to produce more quantum of agricultural produce and better in terms of quantity and quality. As much as 80 percent of farmers in India are small marginal landholders who use traditional methods of production. Most of these farmers lack economies of scale as a result of small-scale production, resulting in a high per capita cost and generally low production levels. Finance is typically inadequate or in other cases just not accessible.

Here is where micro financing for agriculture sector has a very important role to play—it helps poor farmer households meet basic needs, protects against risks and most importantly aids improvement in income. There are start-ups and established Farm Producer Companies doing good work in this space. To avoid risk of NPAs, these companies leverage tech to build an entire ecosystem around microcredit lending including market tie ups.

Another factor for credit support need to Agriculture is the growing demand for food which is expected to increase by 60 percent by 2050. The agricultural system is already under pressure to satisfy the current demand. Hence the only way to increase food production is to invest in sustainable technologies and climate-smart agriculture. These kinds of investments would enable farmers to produce more food with less of an environmental impact. Wise investments could also help keep food prices lower and promote economic health in rural areas.

One more area is Industrialized agriculture is the type of agriculture where large quantities of crops and livestock are produced through industrialized techniques for the purpose of sale. The goal of industrialized agriculture is to increase crop yield, which is the amount of food that is produced for each unit of land. Crops and livestock made through this type of agriculture are produced to feed the masses and the products are sold worldwide.

Industrialized agriculture is able to produce large quantities of food due to the farming methods used. Instead of using animal and manpower to work the fields, industrialized agriculture utilizes large machines, which are more powerful and can work faster and harder.

Although industrialized agriculture is necessary to feed the growing human population, there is another type of agriculture that is regularly practiced today is **Subsistence agriculture**. Subsistence agriculture is one when a farmer lives on a small extent of land and produces the required food to feed his or her household and have a **small cash crop**. The goal of subsistence agriculture is to produce enough food to ensure the survival of the individual family. If there is excess food produced, it is sold locally to other families or individuals. Subsistence agriculture does not rely on chemical fertilizers or pesticides and instead utilizes more natural techniques.

Most farmers have animals, including chickens, goats and cows, and the manure from these animals is used to fertilize the plants. The crops produced are then consumed or sold, and the inedible parts of the plants are used to feed the livestock. This creates a closed circuit within the farm where nothing goes to waste. This type of agriculture also needs institutional finance support.

Empirical evidences suggest that every 1% increase in agricultural credit helps in producing 0.29% increase in agricultural GDP and consequently generating increased income. This acceleration in income generation is significantly dependent on better capital formation in agriculture. While investment credit is needed for capital formation, crop loan helps by sustaining production process. As a responsible Bankers, we have to support the agricultural activities for both crop cultivation and investment credit on regular basis.

For all the above, the need for sensitising the lenders is the need of the hour on Pan India basis to impart the latest information and guidelines on Agriculture financing and farm credit management.

Topics covered

With this objective, Professional Development Centre, South Zone, Chennai of IIBF has decided to organize a two days Training Programme on physical classroom mode at our institute, covering the major focus areas as under.

- Opportunities for lending to Agriculture,
